

Pranay Yadao Pazare

Blockchain & Full Stack Developer

pranayofficial09@gmail.com | Pune, Maharashtra, India | +91 8551804412 | LinkedIn

PROFESSIONAL SUMMARY

Results-driven Blockchain and Full Stack Developer with 4+ years of experience in building scalable applications and microservices. Proficient in developing user-friendly interfaces using React.js, Vue.js and integrating Web3 functionalities for blockchain applications. Demonstrated expertise in implementing smart contracts using Solidity and Rust, optimising database queries, and deploying cloud-based solutions. Skilled in developing decentralised applications on blockchain platforms like Ethereum, Polygon, and Solana. Proven ability to collaborate with cross-functional teams to deliver innovative technical solutions.

PROFESSIONAL EXPERIENCE

Full Stack Blockchain Developer

[Blocsys Technologies Pvt. Ltd.](#) | February 2022 - Present

Tamper-Proof Document Solution

- Developed a tamper-evident document proof solution using secure hashing algorithms and anchored verification proofs on the Polygon blockchain to ensure immutability and auditability.
- Built SDK to enable simple integration of proof submission, hash generation, and verification across backend and web applications.
- Designed and optimised backend APIs for proof submission, status tracking, hash-based verification, and audit-ready responses.
- Implemented file canonicalization and hashing algorithms to ensure consistent hash values across different file formats.
- Improved scalability and reliability through batch/stream processing, robust error handling, and production-focused testing.

Web3 Trading & Smart Wallet Solutions

- Integrated spot and perpetual trading infrastructure using Hyperliquid, enabling order routing, position tracking, and margin management.
- Built low-latency trade execution services with real-time WebSocket synchronisation for order fills, position updates, and liquidation events.
- Implemented risk management logic, including leverage validation, collateral checks, margin monitoring, and auto-liquidation safeguards.
- Implemented Li.Fi SDK for multi-chain swaps and bridging, enhancing interoperability across EVM and non-EVM chains.
- Developed ERC-4337 smart wallet infrastructure using Dynamic.xyz and ZeroDev for account abstraction and seamless user onboarding.
- Implemented paymaster-based gas sponsorship, enabling users to execute transactions without requiring native gas tokens.

Quest & Web3 Engagement Platform

- Integrated third-party Quest services using NestJS for enhanced user interactions.
- Developed modern UI designs with Web3 functionalities, including wallet connection and staking contract integration.
- Implemented OAuth for social login functionality.
- Created in-house quest offers and an admin panel using NestJS and AdminJS.

- Conducted requirement analysis and translated business needs into technical specifications.
- Collaborated closely with cross-functional teams to deliver innovative technical solutions aligned with business objectives.

RWA Tokenization

- Designed and developed smart contracts using Rust for a decentralised application on the Solana blockchain.
- Integrated Fiat On-Ramp solutions (MoonPay) for seamless crypto purchases using debit/credit cards.
- Implemented Thirdweb SDK and Reown WalletConnect SDK to enable wallet connections and dApp interactions across EVM-based blockchains and Solana, ensuring seamless multi-chain compatibility.
- Implemented functionality to create assets (tokens) and enable users to buy and sell them on the secondary market.
- Built a React.js frontend to interact with both Solana (Rust) and EVM smart contracts, providing a unified user experience.

NFT Marketplace Platform

- Developed a full-stack NFT marketplace application using Vue.js for the frontend to create a reactive and user-friendly interface.
- Integrated Web3 wallet functionality to facilitate user interactions with the marketplace.
- Collaborated with backend services to display real-time NFT transaction events using Moralis.
- Integrated Python backend services for off-chain operations such as user authentication, metadata management, and analytics.

Staking and Farming Pools

- Developed the React.js frontend to provide an intuitive user interface for staking and farming functionalities.
- Integrated Web3 interactions to enable seamless on-chain staking and yield farming experiences.
- Designed user flows that incentivise users with rewards, enhancing engagement and usability.

IDO/IGO Launchpad

- Developed a user-friendly React.js frontend for the IDO/IGO launchpad, enabling seamless navigation for users to participate in fundraising.
- Created intuitive interfaces for onboarding and managing IGOs, including features for taking snapshots and performing lotteries.
- Designed user flows for managing staking pools and interacting with smart contracts, enhancing user engagement and experience.

Telegram Mini-App Bot

- Designed and developed the user interface for a reward-based Telegram bot, incorporating features like Tap-to-Earn, daily check-ins, and social tasks.
- Created engaging user experiences that facilitate easy interaction with the bot's functionalities.
- Implemented real-time updates within the bot interface to enhance user engagement and responsiveness.

AI-Agents

- Designed and developed the user interface for a multi-purpose AI agent platform on Solana, ensuring seamless user interactions for both on-chain and off-chain functionalities.
- Created engaging components for real-time decision-making and task execution, leveraging OpenAI-powered knowledge retrieval.
- Developed intuitive user flows for minting and binding tokens to agents, allowing users to create unique, token-gated AI personas.

Search-Pad

- Developed a user interface that supports multiple social logins, including X, Discord, and Telegram, while integrating wallet functionality to capture user wallet addresses for airdrop purposes.

- Implemented backend services for OAuth functionality, enabling secure user authentication and retrieval of ERC wallet addresses.
- Generated CSV files containing user data for efficient management and processing.

Web Developer

[Zummit Infolabs](#) | June 2021 - January 2022

- Developed a user interface for the login page, enhancing user accessibility and experience.
- Integrated login API to facilitate secure user authentication.
- Created interactive pages for users to engage with predefined interview questions sourced from the backend.

TECHNICAL SKILLS

Programming Languages: Solidity (v0.8.35), Rust, JavaScript (Node.js), TypeScript, PHP, SQL, Python

Blockchain: Hardhat, Truffle, Remix IDE, IPFS, Chainlink (Randomisation), NFTs, Staking & Farming, Ethereum, Polygon, Solana, ERC-4337 Account Abstraction

Frontend: React.js, Next.js, Vue.js, HTML5, CSS3, Redux, Material UI, Yew

Backend: Node.js, Express.js, NestJS, Jest, Laravel, PHP

Databases: MongoDB, MySQL

DevOps & Cloud: AWS (EC2, S3, Lambda, EBS, Cloudwatch), Google Cloud Platform (GCP), Docker, CI/CD

Tools & Others: Git, RESTful APIs, Postman, Microservices Architecture, Agile Methodologies (JIRA)

SDK Development: TypeScript SDK design, API client libraries, package integration

AI Tools: ChatGPT, Claude, Cursor AI, TRAE, Abacus AI

EDUCATION

Bachelor of Electronics and Telecommunication Engineering

Savitribai Phule Pune University | 2021
